

InLook system® Excellence - tool for increasing the internal company value

Let's win together with us. We are offering our own innovative solution, that won the “**Best business impact on company innovation using Cloud service**” category in the **EuroCloud Slovakia Award 2014** competition. By using the offered solution, you will gain the improvement of the organization performance and streamlining of the management knowledge and expertise.

By using **InLook system® Excellence** in management of your organization you will gain:

- **significantly streamlined performance management system** (realized based on Balanced Scorecard methodology with support of strategic cost management model),
- **on-line view** on the central job positions evidence linked with the organization **process model** and job scheduling including the workplace (i.e. address, building / factory, floor, room),
- on-line evidence of required employee competences (**competence management**) based on the system of organization standards (rules, policies, methods),
- **on-line employee deputy record keeping** and standardization of the method of wage calculation for representation within all organization parts and deployed places of work,
- **reduced cost and risks** arising from implemented projects and organization, process or technology changes within organization.

By using **Business Intelligence solution** (transformation of data to information in real time) and our own **know-how** (EU registered trademark no. 004913265) **you will get more** sophisticated competence when dealing with challenges of strategic nature and crucial analytical insights for more qualified and better decisions. InLook system® displays in the on-line mode planned and actual parameters of the company both on the strategic level (during 3-year term by top - bottom approach) and operative level (by monitoring critical operating data using bottom - up approach).

With Business Intelligence InLook system® we are helping you to **streamline** decision-making process (quality check, work procedures, employee work efficiency), **optimize** operating models (budget, pricing, cost calculations) and **clarify** achieved results (regular on-line reporting of achieved results).
